

STÖBER

Driving Innovation for Packaging OEMs

Reduce Space Requirements
Minimize Components & Maintenance

*At an average of \$175/sq ft,
space requirements can easily be
a million-dollar problem.*

The Challenge of Space

Floor space is a challenge for you and your clients. It is expensive and often uncompromising, limiting your ability to place more machines and increase production.

STOBER's innovative designs and solutions can reduce your equipment footprint by 20%

Fewer Components Less Maintenance

A standard planetary gear solution requires numerous components from multiple vendors. This increases your time for design and installation while also increasing maintenance needs for your customer.

STOBER solves these issues with our hollow bore, right angle solution. Fewer parts from a single vendor and less maintenance result in lower costs for you and your client.

Standard Solution
6 Components
4 Suppliers
Regular Maintenance

STOBER Innovation
